University of Houston Mosquito Spraying

Houston, October 24, 2011 – The recent warm weather following our brief cold spell has caused a significant increase in the mosquito population on campus and across the City. On Monday, October 24, 2011, Myers Pest and Termite Control will be conducting mosquito spraying throughout the UH campus from 5-10 PM.

The spray will be administered via cart mounted mist system and small back-pack units. All staff and students should remain indoors while the spraying is taking place in their immediate vicinity. The spray dissipates within 5 minutes of application at which time it is safe to go outdoors.

If you have any questions, please contact Roger Warner.

About the University of Houston

The University of Houston is a comprehensive national research institution serving the globally competitive Houston and Gulf Coast Region by providing world-class faculty, experiential learning and strategic industry partnerships. UH serves more than 38,500 students in the nation’s fourth-largest city, located in the most ethnically and culturally diverse region of the country.
