

ECONOMICS 6331 – Probability and Statistics, Fall 2007

Homework 10. Wednesday November 14, 2007. Due Monday November 21.

1. Ramanathan, Exercise 5.7, page 118.
2. Assume that X and Y follows a bivariate normal distribution.
 - a) Show that $X - E(X|Y)$ is independent of Y .
 - b) Find the variance of $X - E(X|Y)$ (hint: This a linear function of X and Y).
 - c) Now show that $\frac{1}{(1-\rho^2)}[(\frac{X-\mu_X}{\sigma_X})^2 - 2\rho(\frac{X-\mu_X}{\sigma_X})(\frac{Y-\mu_Y}{\sigma_Y}) + (\frac{Y-\mu_Y}{\sigma_Y})^2]$ is distributed as $\chi^2(2)$.
3. (12% of 2003 final) Assume $X \sim N(0, 9)$, $Y \sim N(2, 9)$, and $Z \sim N(2, 9)$. Further assume that the covariance between X and Y is 2, while both X and Y are independent of Z .
 - i) What is $E(X|Y = 2, Z = 3)$? (State the formula you use and then the number.)
 - ii) What is the conditional variance $Var(X|Z = 3)$?
4. Assume that X is an n -dimensional random variable with covariance matrix Σ and Y is an n -dimensional random variable, independent of X with covariance matrix Ω . Show that the covariance matrix for $X + Y$ is $\Sigma + \Omega$. (If you have problems with the general situation, we will give full point is you show it for 2-dimensional case.)
5. (24% of final 2005) Assume that Z is a normally distributed random variable with variance 9 and mean 2, and that Z is independent of (X, Y) where (X, Y) is a bivariate normally distributed random variable with mean $\mu' = (0, 0)$ and variance-covariance matrix
$$\Sigma = \begin{pmatrix} 1 & 1 \\ 1 & 2 \end{pmatrix}$$
 - a) What is the conditional mean of $Y|X$?
 - b) What is the conditional variance of (X, Z) given Y ?
 - c) What is the conditional mean of X given (Y, Z) ?
 - d) What is the distribution of $2X^2 - 2XY + Y^2$?
