FIRE SAFETY ON CAMPUS

Fire Safety consists of prevention, planning, and response. Everyone on campus, whether a student, faculty member, staff member, or an outside contractor, has a responsibility to prevent fires, to plan for fire emergencies, and to respond according to the emergency plan.

HOW YOU CAN PREVENT CAMPUS FIRE HAZARDS

ELECTRICAL HAZARDS

Use of electrical “octopuses” can result in overloaded circuits and fire. Replace damaged wires and match appliance power requirements to the circuit power. A general "rule of thumb" formula is:

\[
\text{appliance power (watts)} = \frac{\text{the approximate power}}{110 \text{ volts}} \quad \text{(amps) being used.}
\]

Most electrical circuits only supply 15 or 20 amps for all the outlet on that circuit. Extension cords should not be used as a substitute for permanent wiring.

APPLIANCES

Use only U.L. listed appliances. Hotplates, percolators, irons, halogen lamps, space heaters, etc., should not be left unattended and are prohibited in some places. They should be unplugged after use and not stored until they are cool enough to touch. Keep heaters away from curtains and furniture. Match the size of an extension cord to the appliance power cord to prevent cord overheating.

COMBUSTIBLE STORAGE

Combustible material should not be stored in corridors, stairwells, or mechanical rooms.

HOLIDAY DECORATIONS

Open flames are prohibited. Cut natural trees must be approved by DPS Fire marshal’s Office. Decorations must be removed before leaving for the holiday break.
OPEN FLAMES

Candles, bunsen burners, sterno, etc., should never be left unattended. Extinguish all open flames, even if left for a very short time. Most open flames require a permit. Contact the Public Safety Department Fire Marshal concerning the use of candles, and for permits for bar-b-que pits, bonfires, and welding/cutting processes.

FLAMMABLE LIQUIDS

Gasoline, paints, glue, etc., should not be stored in residential buildings. Flammable liquid storage in labs, shops, classrooms and office space, is limited to specific quantities and containers. Contact DPS-Fire Marshal for specifics.

OBSTACLES

Storage of bicycles, chairs, desks, and other items is prohibited in all exitways. This includes securing bicycles to hand railings on ramps or stairs that are a part of the path of access/egress to buildings.

SMOKING

Smoking is not allowed in most buildings on the UH campus. Non-combustible ashtrays should be used in areas where smoking is allowed. Ashes, matches, and cigarette ends should be cold before being dumped.

COOKING

Cooking should be done only in approved areas of kitchens, using United Laboratories (UL) listed appliances. Grease should be cleaned from appliances as soon as possible.
HOW YOU CAN PLAN FOR A FIRE EMERGENCY

GENERAL EVACUATION PROCEDURE

Participate in fire drills and take them seriously.

Be familiar with the location of at least two exits other than an elevator. Elevators should not be used as an exit in a fire emergency.

Know the location and operation of the fire alarm system.

Remember 911 for fire, medical, and police emergencies.

Learn how to use fire extinguishers, how to select the right type, and typical locations.

Advise personnel to begin evacuating at the first sign of smoke or a fire alarm. Know the location outside the building where members of your department or class will meet upon exiting.
Assign one person and a backup to assist with evacuating each disabled individual.

HOW YOU SHOULD RESPOND DURING A FIRE EMERGENCY

SOUND THE ALARM

If you discover or suspect a fire, sound the building fire alarm.

DIAL 911

EXTINGUISH THE FIRE

Only use a fire extinguisher if the fire is very small and you know how to do so safely. Spend no more than 30 seconds making this effort.

CONFINE THE FIRE

Close as many doors and windows as possible as you leave. This helps to confine the fire.

EXIT VIA THE NEAREST STAIRWAY OR EXIT

Try to rescue others only if you can do so safely. Take your personal belongings and exit the building. Do not use an elevator as an exit. Move away from the building and don't interfere with the fire department's efforts. Do not go back into the building until allowed back in by UHPD.
MEET AT PRE-DESIGNATED SITE

Congregate at the pre-designated location outside the building so that a head count of the group may be taken.

ASSIST DISABLED PERSONNEL

If the fire is not on the same floor, close all doors and wait for assistance. Have a second person report your location to UHPD or the fire department. Hearing or visually impaired persons should be notified of the alarm and assisted, if necessary, to a safe escape route. If necessary, disabled persons may be assisted to the stairwell landings to await emergency personnel. All doors to the stairwell must be closed in order to reduce the buildup of smoke.

ADDITIONAL SKILLS TO HELP YOU SURVIVE A BUILDING FIRE

FEEL DOORS BEFORE OPENING

Feel the door before opening it. If it's hot leave it closed and seal cracks and vents to keep the smoke out. If it is cool, brace against the door and open it slightly. If there is heat or heavy smoke, close the door and stay in the room.

CRAWL IF THERE'S SMOKE

If you get caught in smoke, get down and crawl. Cleaner, cooler air will be nearer the floor.

SIGNAL FOR HELP

Hang an object out the window to attract the fire department's attention. If there is a phone in the room, call the fire department and report that you are trapped. Be sure to give your room and location.
IF YOU ARE ON FIRE

If your clothes catch on fire, stop, drop and roll, wherever you are. Rolling smothers the fire.

Use cool tap water (immediately) on burns. Don't use ointments. If skin is blistered, dead white, brown, or charred, seek medical attention.
