The goal of the University of Houston is quite simple. To bring the best minds and resources in the world to Houston. It’s paying off. Through their scientific investigations funded by the National Institutes of Health and many other agencies, University researchers hope to find and understand the molecular basis for brain function and thereby identify new strategies to restore damaged nerve cells, reduce dementia, treat Lou Gehrig’s disease, and improve antibiotic effectiveness. That’s what makes a great university a great university.

Dr. Arnold Eskin
Advisor: Society for Research on Biological Rhythms, Journal of Biological Rhythms
Member: American Physiological Society, Society for Neuroscience
Expert: Memory formation, biological clocks

Dr. Stuart E. Dryer
Advisor: National Institutes of Health, National Science Foundation
Expert: Brain development, biological clocks

Dr. Anne H. Delcour
Reviewer: National Institutes of Health
Member: American Society for Microbiology, Biophysical Society, New York Academy of Sciences
Expert: Bacterial metabolism, antibiotic susceptibility

Dr. Paul Hardin
Advisor: Journal of Biological Rhythms
Member: Genetics Society of America, Society for Neuroscience, Society for Research on Biological Rhythms
Expert: Biological clocks, molecular genetics of behavior
