## HOUSTON: GENETIC CITY

The Houston: Genetic City exhibit explores Houston's future development post-industrial, post-oil and post-sprawl. Presented as a series of maps, models and virtual reality simulations, the exhibition considers potential development solutions for Houston's hot, humid and flood-prone climate. The exhibit debuted at the world renowned Aedes Architectural Forum in Berlin July 2018. The exhibit will be open to the public in the College's Mashburn gallery through January 5th.
