

MYOPIA
{nearsightedness}

Myopia, or nearsightedness, occurs when someone is unable to bring objects at a distance into focus.

If your child's prescription seems to be getting progressively worse, their vision and eye health may be at risk.

MYOPIA MANAGEMENT SERVICE- UH FACULTY/STAFF WEEK

Dec. 10-14 | FREE Myopia Consultations for Children of UH Faculty/Staff

MYOPIA BY THE NUMBERS

42% Currently, 42% of the U.S. population is myopic, up from 25% in the 1970s.

52% It is estimated that a little over half of the world population will be myopic by the year 2050.

2-3X Individuals with myopia are 2-3x more likely to develop glaucoma.

10X High myopes are 10x more likely to experience a retinal detachment

SETTING YOUR CHILD'S FUTURE SIGHT UP FOR SUCCESS

If you were highly nearsighted {myopic} as a child, chances are you've thought about whether your child (or children) would also be affected. Instead of simply correcting their myopia with glasses and/or contact lenses, you now have the option to treat their myopia and slow its progression.

SCHEDULE YOUR FREE CONSULTATION

Bring your child (children) in for a free consultation where our clinicians will determine the condition of their myopia and discuss treatment options to manage its progression.
