

Can You Imagine that Product
can help you find Expired
Drugs?

What is the Product?

- This new Innovation allows pharmacy Owners to cut back on drug shrinkage while allowing their employees to devote more valuable time towards serving their customers. This simple gadget gives advance notification to inventory personal to allow drugs to be dispensed before the expiration date to minimize the waste of Inventory return

How does this Work?

This is the Arduino Pro mini Chip (18*33mm) Which is connected with the buzzer and this whole thing is placed under the Cap Of the bottle and code this chip. Set the month and the year the Drug is about to expire and as coded the buzzer will go off and let the Pharmacist and Pharmacy tech know that this drug is about to expire so they can sell it if they have enough time frame or return it back to the manufacturer so the store can get the credit for this product.

Conclusion

- This new product can help the people in pharmacy figure out which ones are drugs that are about to expire by using minimum time by sticking this new gadget to incoming slow mover bottles and can reduce the shrinkage by avoiding any human errors.

Thank You
