

Remote Desktop Access

1. If you have not yet requested remote desktop access and require it to work, please contact DAIT for setup
2. If you have previously contacted DAIT for setup there should be a icon on your desktop that looks like this

3. Clicking on the Icon may bring up a unidentified connection windows, press connect to proceed

4. Either you will be directly launched into your remote desktop, or a login window asking for credentials will show up
5. Click on more choices and make sure you're logging as your cougarnet credentials

6. Enter your credentials and press okay and it should bring you directly to the remote window

Note: remote desktop will have some restriction and limitations. It is far more recommended to save your files on either the server or one drive and work only through the VPN.
